

AZURE **QUICKCONNECT**

Accelerate your integration journey

AZURE QUICKCONNECT

A proven integration catalyst

Valorem Reply's Integration Accelerator was designed and built upon the following principles:

- 1) Provide a **modular, and easy to use and maintain framework** for the development of Azure-based integration platforms, for both clients and Valorem Reply
- 2) **Accelerate the delivery of Azure-based Integration projects**, reducing the cost and effort.
- 3) Enable a **standard way of working** to ensure consistently high-quality solutions
- 4) **Reduce the operational maintenance effort** for Azure based integration platforms
- 5) **Enable a Cloud First approach** prioritising cloud native services to improve cost efficiency, scalability, elasticity, security, reliability and resiliency of Azure based integration solutions

What is Azure QuickConnect?

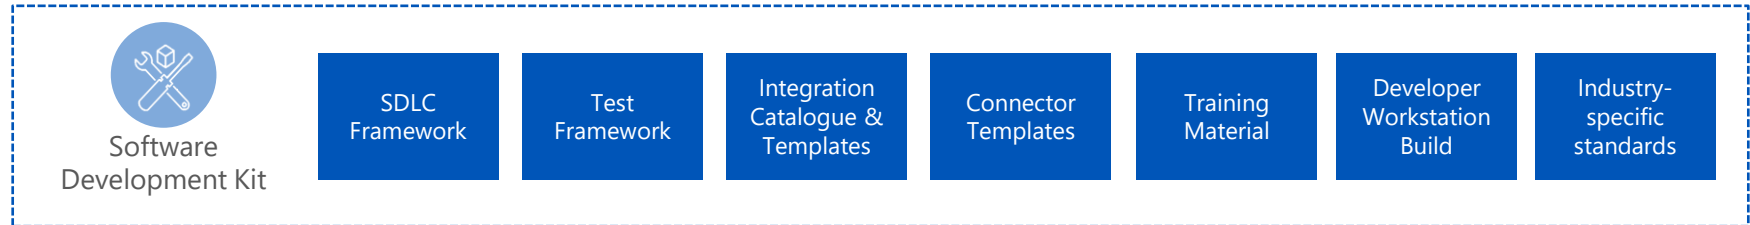

AQC is an Integration Accelerator. i.e. a collection of frameworks, libraries, code samples, software components and ready-to-use tools that enable businesses and developers to deliver complex integration solutions quickly, without having to create all the solution components from scratch. AQC also includes a set of tools that streamline and simplify operational management of integrations solutions.

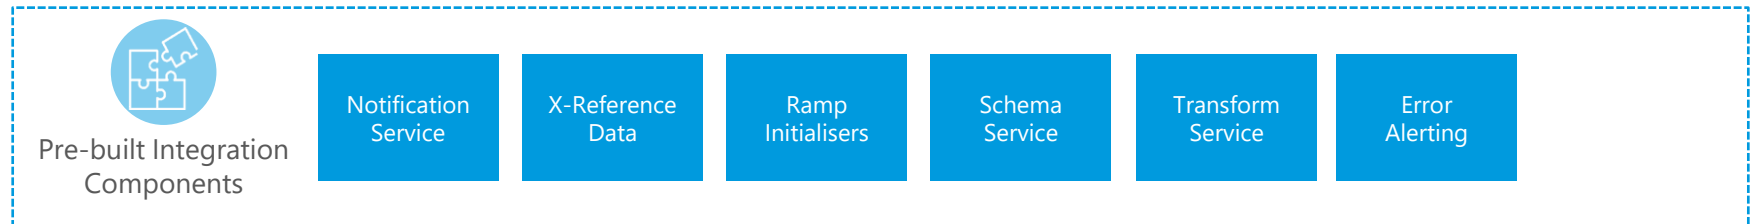

AZURE QUICKCONNECT

A comprehensive Integration framework

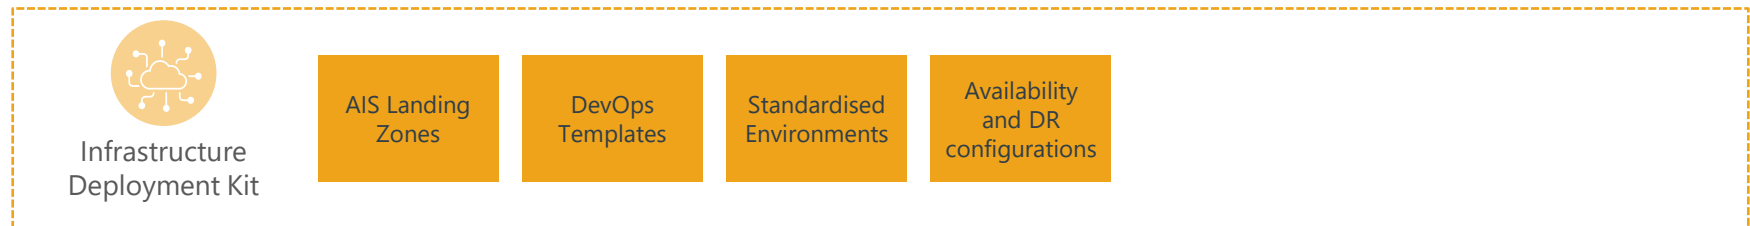

A collection of frameworks, documentation and templates that assists developers in building an Azure based integration platform

Pre-built solution components that solve a lot of integration challenges and provide capabilities that are not provided by Azure Integration Services.

Cloud infrastructure required to build an integration platform in Azure, including DevOps pipelines

The tools required to help clients manage the integration platform once it is in production

AZURE QUICKCONNECT

Key Benefits

Software Development Kit

- Enables accelerated development with a robust set of tools.
- Simplifies coding through reusable libraries and frameworks.
- Supports best practices with standardized development procedures.

Pre-built Integration Components

- Offers plug-and-play modules for immediate use.
- Reduces time-to-market with ready-made solutions.
- Enhances reliability with tested and proven components.

Infrastructure Deployment Kit

- Streamlines Azure infrastructure setup with automation.
- Ensures consistent deployments through templated configurations.
- Optimizes resource usage with scalable infrastructure designs.

Operational Management Tool Kit (Admin Portal)

- Provides centralized control and visibility over integrations.
- Facilitates real-time monitoring and alerts for system health.
- Enhances decision-making with detailed analytics and reporting.

AZURE QUICKCONNECT

Why choose an accelerator over a product?

Highly flexible

This is a framework that can be changed and altered to match customer needs as part of delivery

Cost Effective

Framework comes at zero cost but provides over 250 man-days of effort delivered immediately

Built On Known Technology

The accelerator is built using standard, well known Azure components and services providing easy training options

Inflexible

Only the features that make up the product are available for use. Release patterns control feature availability

Locked In Cost Model

Products are based on a license cost. That cost may include many unrequired features. Lock in is also required

Proprietary Technology

Whilst use of the product can be learnt typically the need for on-going expensive consultancy will be required.

We bring it with us and leave it with you
